Stargazers

Each data point corresponds to at least one stargazer event. The time resolution is one day.

Note: Each data point in the plots shown below is influenced by the 14 days leading up to it. Each data point is the arithmetic mean of the “unique visitors per day” metric, built from a time window of 14 days width, and plotted at the right edge of that very time window. That is, these plots respond slowly to change (narrow peaks are smoothed out).

The plot displays the daily mean of unique visitors from the last 14 days for two referrers. The x-axis represents the date from April 24, 2022, to July 17, 2022. The y-axis represents the unique visitors per day, ranging from 0.00 to 0.24. The blue line represents github.com, which shows a highly volatile pattern with several peaks and troughs. The orange line represents mail.qq.com, which shows a single cluster of points around 0.07 in late July.

date	referrer	unique visitors per day (mean from last 14 days)
